I. Title of the project

Online Smart Parking system (web application)

II. Team Size

4 members

III. Scope or Objective of the project

Our proposed project is an online parking booking system which provides customers with a way of reserving a parking space online. It helps to overcome the problem of finding a place for parking in commercial areas that unnecessarily consumes time. Hence the project will be a web-based reservation system where users can view various parking areas and select the space to view whether the space is available or not. If the booking space is available then he/she can book it for a specific time slot. Users can also make an online payment for booking. After making the payment users are notified about the booking with a unique parking number. The project aims to avoid the rush in parking slots for choosing a space and reduce the number of cars waiting or searching for parking venues. The application shall run on different platforms. The application forms an individual parking space for each vehicle before their entry into that area/zone. The application asks the user to choose their desired space for parking. The application mainly checks this capability. The project is first developed on a Web-based application like a website, but later it can be developed on Android/IOS applications if the customers want.

IV. Modules

1) LOGIN TO ACCOUNT (ALONG WITH HISTORY OF BOOKINGS)

- **Admin Login:** The system is under the supervision of the admin who manages the bookings
- **User login/registration:** Users have to first register themselves to login into the system.

2) VIEW PARKING

- **Different Parking areas outlook:** The system will provide three parking areas of different locations.
- **Parking availability check:** The User can click on spaces to view the availability. If space is already booked it'll be marked yellow and therefore the available ones are going to be seen in normal colour.

3) BOOK PARKING

- **The Parking booking online for date and time:** Users can book parking space for their required date and time.
- **Automatic cost calculation:** The system calculates the total cost incurred for parking based on the time that the user has asked for booking.
- **Email on successful parking booking:** When the user is successful in parking the space, the system sends a confirmation and 'thank you' email regarding the space booked.

4) CANCEL BOOKING

- **Parking cancellation:** Users may even cancel their bookings by login into the system anytime.

5) FEEDBACK

- **Feedback:** The system has a feedback form, where the user can provide feedback into the system.

6) LOGOUT

V. Estimation Techniques

1. Function point calculation:

2. Intermediate cocomo model

Domain Characteristic Table

MEASUREMENT PARAMETER	COUNT (value >= 0)	WEIGHTING FACTOR		
		Simple	Average	Complex
Number of User Input	<input type="text" value="20"/>	<input type="radio"/>	<input checked="" type="radio"/>	<input type="radio"/>
Number of User Outputs	<input type="text" value="7"/>	<input checked="" type="radio"/>	<input type="radio"/>	<input type="radio"/>

This application derives the COCOMO software engineering metric as found in Robert Pressman's "Software Engineering, A Practitioner's Approach", (McGraw-Hill, 97). Also see Boehm, "Software Engineering Economics" [\[1\]](#).

INSTRUCTIONS: Choose a mode for your project based on the criteria above by selecting a corresponding radio button. Then enter the estimated lines of code in the SLOC input text box. To see your result, simply hit the "calculate COCOMO" button. If you enter anything other than a number, you will be shown a prompt informing you so. You will then be taken to the results page, so that you can, if desired, see the coefficients for the mode that you selected. The results, however, will be read "NaN" and will be bogus. Hit the "back" button on your browser, select the "reset" button, re-select the mode and enter a number in the SLOC text box and finally hit the "calculate COCOMO" button.

[Back to top](#)

● **Result(estimated time for intermediate cocomo using KLOC):**

COCOMO RESULTS for parking reservation system								
MODE	"A" variable	"B" variable	"C" variable	"D" variable	KLOC	EFFORT, (in person-months)	DURATION, (in months)	STAFFING, (recommended)
semi-detached	2.3998996541520006	1.12	2.5	0.35	1.500	3.779	3.981	0.949
<p>Explanation: The coefficients are set according to the project mode selected on the previous page, (as per Boehm). Note: the decimal separator is a period.</p> <p>The final estimates are determined in the following manner:</p> <p>effort = $a \cdot KLOC^b$, in person-months, with KLOC = lines of code, (in thousands), and:</p> <p>staffing = effort/duration</p> <p>where a has been adjusted by the factors:</p>

Smart Parking Reservation System

The screenshot shows a web browser window with the URL `localhost/SPRS/edit-category.php?editid=1`. The page is titled 'Admin' and has a sidebar menu with options: Dashboard, Vehicle Category, Add Vehicle, Manage Vehicle, Reports, and Search Vehicle. The main content area is titled 'Update Category' and contains a form with a single text input field labeled 'Category Name' containing the text 'Four Wheeler Vehicle'. Below the input field is a blue 'Update' button. The breadcrumb trail at the top right reads 'Dashboard / Category / Update Category'. The footer shows 'Copyright © 2021' and 'Smart Parking Reservation System'.

- **Add Vehicle :**

The screenshot shows a web browser window with the URL `localhost/SPRS/add-vehicle.php`. The page is titled 'Admin' and has a sidebar menu with options: Dashboard, Vehicle Category, Add Vehicle, Manage Vehicle, Reports, and Search Vehicle. The main content area is titled 'Add Vehicle' and contains a form with the following fields: a dropdown menu labeled 'Select' with 'Four Wheeler Vehicle' selected, and text input fields for 'Vehicle Company', 'Registration Number', 'Owner Name', and 'Owner Contact Number'. Below the input fields is a blue 'Add' button. The breadcrumb trail at the top right reads 'Dashboard / Vehicle / Add Vehicle'.

The screenshot shows a web browser window with the URL `localhost/SPRS/view-incomingvehicle-detail.php?viewid=5`. The page is titled "Admin" and has a sidebar menu with options: Dashboard, Vehicle Category, Add Vehicle, Manage Vehicle, Reports, and Search Vehicle. The main content area is titled "Dashboard" and "View Incoming Vehicle". It displays a table with the following data:

Parking Number	323009894
Vehicle Category	Two Wheeler Vehicle
Vehicle Company Name	Activa
Registration Number	DL 07 AC 4555
Owner Name	Abhi
Owner Contact Number	4654654654
In Time	2021-04-06 14:28:38
Status	Vehicle In

Below the table, there is a "Remark" section with a text area.

The screenshot shows the same web browser window, but the form is now for updating a vehicle. The "Status" dropdown is set to "Vehicle In". The "Remark" section is empty. The "Parking Charge" field is empty. The "Status" dropdown is set to "Outgoing Vehicle". There is an "Update" button at the bottom.

● Search Vehicle :

The screenshot shows the Admin interface for the Search Vehicle page. The left sidebar contains a menu with options: Dashboard, Vehicle Category, Add Vehicle, Manage Vehicle, Reports, and Search Vehicle. The main content area has a breadcrumb trail: Dashboard / Search Vehicle / Search Vehicle. Below this is a section titled "Search Vehicle" with a form labeled "Search By Parking Number". The input field contains the text "522578915" and a blue "Search" button is positioned to its right. At the bottom of the page, there is a footer with "Copyright © 2021" on the left and "Smart Parking Reservation System" on the right.

The screenshot shows the Admin interface for the Search Vehicle page after a search. The left sidebar and breadcrumb trail are the same as in the previous screenshot. The "Search Vehicle" section now displays the results for the keyword "522578915". Below the search input field, there is a heading "Result against '522578915' keyword" followed by a table with the following data:

S.NO	Parking Number	Owner Name	Vehicle Reg. Number	Action
1	522578915	Maresh	TS 08 LN 3830	View

The footer remains the same with "Copyright © 2021" and "Smart Parking Reservation System".

● Profile Update

The screenshot shows the 'Admin Profile' page of the Smart Parking Reservation System (SPRS). The browser address bar indicates the URL is `localhost/SPRS/admin-profile.php`. The page features a sidebar with navigation options: Dashboard, Vehicle Category, Add Vehicle, Manage Vehicle, Reports, and Search Vehicle. The main content area is titled 'Admin Profile' and contains a form with the following fields:

- Admin Name: Ksheeraj Kandra
- User Name: ksheeru
- Contact Number: 8500050911
- Email: kandra.ksheeraj@gmail.com

An 'Update' button is located at the bottom right of the form. The top right corner of the page includes a user profile menu with options: My Profile, Change Password, and Logout. The footer displays 'Copyright © 2021' and 'Smart Parking Reservation System'.

The screenshot shows the 'Change Password' page of the Smart Parking Reservation System (SPRS). The browser address bar indicates the URL is `localhost/SPRS/change-password.php`. The page layout is consistent with the previous screenshot, featuring the same sidebar and top navigation. The main content area is titled 'Change Password' and contains a form with the following fields:

- Current Password
- New Password
- Confirm Password

A 'Change' button is located at the bottom right of the form. The top right corner of the page includes a user profile menu with options: My Profile, Change Password, and Logout. The footer displays 'Copyright © 2021' and 'Smart Parking Reservation System'.

VIII. Challenges overcome during the development of the project

1) Gathering all the initial client(user) requirements.

Gathering all the module information first as we started implementing the project using the Waterfall model.

Each module expected functionalities, assessing them is the first challenging problem that was to be by us.

We have overcome it by understanding all requirements, workflow of clients and found ways in optimizing workflows.

2) Time constraint(Limited time assigned for completion of project)

Due to lack of sufficient time, we could not implement all the ideas (like image processing of car number plates, location tracking).

We could not validate the accuracy of login details of customers/users (by verification of aadhar number, mobile number, personal details).

We didn't consider all the limitations of this system. But we tried to consider a few of them and we are in the process of rectifying them with new ideas/methods.

3) Site usability(Failure of user interaction)

While creating the website we have failed to predict the user interaction with the site. This resulted in failure of many tasks and their functionalities.

This was solved by visualizing every step of process layout by carefully creating and understanding UML diagrams and UI design.

4) Implementation and completion of payment module.

Payment module is the most complex module. Implementation of this module took us a lot of time to discuss the procedure and types of payment methods.

We may not implement all the functionalities as expected but we are working hard to emulate a perfect payment portal. We are working hard to implement the perfect working of this module for secure transactions of the users.

5) Navigation

Navigation is the most important aspect of website design. The navigational structure of the website is also a big challenge in the process of website creation. Websites should be easily navigable for the users.

Effective navigational structure enhances the usability of our website.

6) XAMPP service provider usage

XAMPP(cross-platform, Apache, MySQL, PHP and Perl) is one of the widely used cross-platform web servers, which helps developers to create and test their programs on a local webserver.

This provides an interface between our backend (sql and php) database and front end of our website. This is hard to use and it took us time to understand the usage of XAMPP. This ensures the perfect working of our website.
